

RECENT NEWS ABOUT TS SCOTT

In 1998, the Company affiliated to TS SCOTT, the largest survey vessel to enter service with the Royal Navy and only deep-water survey ship.

Her advanced sonar array sounding system enables her to chart large areas of ocean at a rate never previously achieved.

She has now been deployed to the North Atlantic where she is currently conducting survey work. It comes after a long lay-up due to technical problems.

We heard from the ship recently, with a video link to a YouTube post which may be of interest to you. HMS Scott
